Ratings

Steady state speed stability at constant load $\pm 0.25\%$
Electrical ratings are based on average alternator efficiency and are for guidance only (0.8 power factor being used).

Operating point

Engine speed 1500/1800 rpm
Static injection timing See engine number plate
Cooling water exit temperature 98°C maximum

Fuel data

To conform to BS2869 class A2.

Performance

Estimated sound pressure level:
1500 rpm 108 dB(A)
1800 rpm 113 dB(A)

Note: All data based on operation to ISO 3046/1, BS 5514 and DIN 6271 standard reference conditions.

Note: For engines operating in ambient conditions other than the standard reference conditions stated below, a suitable derate must be applied.

Note: Derate tables for increased ambient temperature and/or altitude are available, please contact Perkins Applications Department.

Test conditions

Air temperature 25°C
Barometric pressure 100 kPa
Relative humidity 30%
Air inlet restriction at maximum power (nominal) 2.5 kPa
Exhaust back pressure (nominal) 3 kPa
Fuel temperature (inlet pump) 58°C maximum

Note: For test conditions relevant to data on load acceptance, refer to Perkins Applications Department.

Baseload power

Unlimited hours usage with an average load factor of 100% of the published Baseload power. No overload is permitted on Baseload power.

Prime power

Unlimited hours usage with an average load factor of 80% of the published Prime power over each 24 hours period. A 10% overload is available for 1 hour in every 12 hours operation.

Standby power

Limited to 500 hours annual usage with an average load factor of 80% of the published Standby power rating over each 24 hour period. Up to 300 hours of annual usage may be run continuously. No overload is permitted on Standby power.

Starting requirements

Temperature range	
To 10°C (50°F)	Oil: CG4 15w/40
	Starter: 1 x 24 volts
	Battery 2 x 12v x Ah 143
	Max. breakaway Current 1000 amps
	Cranking current 600 amps
	Aids Not required

Note: The battery capacity is defined by the 20 hour rate at 0 °C.

Note: The oil specification should be for the minimum ambient temperature as the oil will not be warned by the immersion heater.

Note: The breakaway current is dependant on the battery capacity available. Cables should be capable of handling the transient current which may be up to double the steady cranking current.

Fuel system

Recommended fuel to conform to BS2869 1998 Class A1, A2
 Type of injection system Direct injection
 Fuel injector Combined unit injector
 Injector pressure 220 ATS (NOP) 1400 bar max. operating pressure
 Delivery at 1500 rpm 630 litres/hour

The above complies with requirements of Classification 3 & 4 of ISO 8528-12 and G2 operating limits stated in ISO 8528-5.

The above figures were obtained under test conditions as follows:

Engine block temperature 45°C
 Alternator efficiency 94%
 Minimum ambient temperature 10°C

Isochronous governing

Under frequency roll off (UFRO) set to 1 Hz below rated frequency
 Typical alternator inertia 20 kgm²

All tests were conducted using an engine installed and serviced to Perkins Engine Company Limited recommendations.

The information given on this Technical Data Sheet is for standard engines, and for guidance only. For ratings other than shown contact the Applications Department.

Noise Data

Noise levels

The figures for total noise levels are typical for an engine running at prime power rating in a semi-reverberant environment and measured at a distance of one metre from the periphery of the engine.
